#### **DETAILED ACTION**

## Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: "50A" (in Fig. 8). A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
  - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 18, 19, 22, 23, 28, 31, 32, 38, and 39 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. It appears claim 16 relates to the embodiment shown in Fig. 10. However, the subject matter claimed in these claims is not disclosed in relation to this embodiment. Specifically, the specification does not disclose that the flange in Fig. 10 has a knife-edge, threaded bores, or a groove on the inner surface.

#### Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/014,164

Art Unit: 3676

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 16, 17, 19-22, 24-26, 28-31, 33, 34, and 36-38 are rejected under 35U.S.C. 102(b) as being anticipated by Curtis (5,437,482).

Curtis discloses a thin flange having a circular member with first and second sealing faces and first and second boltholes (see Fig. 1). Curtis discloses that the two sets of holes allow the flange to be used between other flanges of different diameters (see Fig. 2). The flange is capable of mating with flanges of the same diameter (i.e. the bolt would extend from one flange, through the thin flange, to another flange). Any of the threaded holes 14a or 14b can be considered a mounting feature.

## Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 16-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crawford '123 in view of Crawford '956.

Crawford '123 discloses a thin flange comprising a first surface and a second, opposite surface. The flange comprises a first set of boltholes arranged in a circular pattern with a first diameter. The flange comprises as second set of boltholes 60 arranged in a circular pattern (i.e. they are arranged on semi-circular portions around the circumference) having a smaller, second diameter. The flange comprises at least one mounting feature 40 or 42 on an inner surface and a

Application/Control Number: 10/014,164 Page 4

Art Unit: 3676

feed through. One of the surfaces comprises a knife-edge. Crawford' 123 does not disclose a knife-edge on the other surface or that the flange is disposed between a first and second flange. Crawford '956 teaches using a flange between a first and second flange of a vacuum component to couple the components together with a vacuum tight seal. Crawford '956 teaches using a knife-edge on opposing surface to ensure the tight seal. Therefore, it would have been obvious for one of ordinary skill in the art at the time the invention was made to modify the flange of Crawford '123 by providing a knife-edge on the other surface so the flange can be used to couple two vacuum components with a vacuum tight seal as taught by Crawford '956.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alison K. Pickard whose telephone number is 703-305-0882. The examiner can normally be reached on M-F (9-6:30), with alternate Friday's off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anthony Knight can be reached on 703-308-3179. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 308-1113.
